

Advanced SIM Card Management

Keep Out the Chaos

Successful large-scale mobile device deployments depend on accuracy. Any device that relies on cellular connectivity must be correctly configured with the right SIM card.

But there can be challenges—like if a company utilizes the same SIM SKU but has different data plan requirements for distinct user groups. Scenarios like this introduce a much higher opportunity for incorrectly issued SIMs or cross contamination. Mistakes can cause delayed launches, poor user experiences, and added costs.

Get Your House in Order

Stratix solves SIM card management challenges with advanced technology and processes to scan, process, and record critical SIM card information at significant scale, speed, and accuracy. We read each individual SIM card's unique ICCID number, record it, and make it available to upload systematically into our ERP system, which is the digital backbone of our operations. Specific SIM ICCIDs are assigned ownership within the system upon initial receipt, locking them and making them only available for use by that designated account and user group. These systematic controls eliminate mis-picks and ensure the right SIM cards are staged and inserted in the correct device.

Challenge	Solution
Lack of data	 Stratix serializes SIM cards into our ERP system to record and match ICCIDs with projects and customer accounts.
Poor quality control	 We prevent the wrong SIM cards from being picked and staged.
Inability to quickly process large numbers of SIM cards	 Stratix can ingest thousands of SIM cards an hour into our systems, allowing for bulk uploads for inventory transactions

Stratix Services

- **Precise project management**
Careful attention to detail ensures success
- **Fast deployment**
Our high-speed integration center leverages proprietary tools for maximum speed and efficiency
- **Flexibility and scale**
We have the capacity and tools to deploy thousands of devices wherever needed
- **Quality assurance validation**
We use automation to rigorously ensure the accurate configuration of devices
- **Wide-ranging expertise**
We know and work with the industry's best to give you powerful options to solve your challenges

Key Business Benefits

- Automating the configuration and enrollment of devices improves quality and lowers costs
- Solutions launch on time with no hiccups, which improves user adoption and delivers the expected ROI
- Get the scale and expertise you need to put the latest enterprise mobility solutions to work for you quickly and efficiently
- With our extensive network of leading device and software providers, Stratix gives you one hand to shake. We make enterprise mobility convenient, easy, and cost-effective

Over four decades of experience helping customers solve their technology challenges

Average 70+ Net Promoter Score—double the industry average

99.87% pass rate in quality control

More than three million devices deployed

Comprehensive lifecycle management programs focused on your business

Why Stratix

We are the most experienced pure-play enterprise mobility specialist in the U.S., and there's no one better to help you navigate the complexities of mobile. We've built the industry's most advanced, high-speed Mobile Integration Center to provision, kit, configure, and deploy your mobile devices, software, and accessories—regardless of how many you need—on time and on budget.
