

# Next-Gen Device Management for Dedicated Devices

## Leaders across the globe drive operational excellence at scale with Esper

Managing dedicated devices is complex — as the device use cases proliferate, the resources required to manage them can't scale at the same rate. See how customers successfully deploy, manage, and update their mission-critical devices.

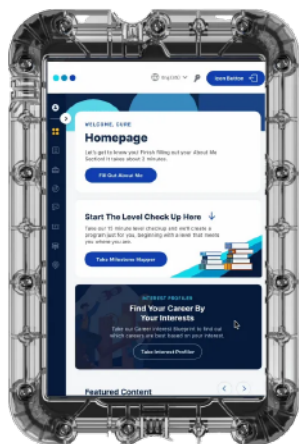

### Hinge Health accelerates patient device provisioning by 800% with Esper

- Hinge Health needs to lock down specific device and app permissions to keep remote patient devices secure
- They also need to keep the device experience as simple as possible for non-tech savvy users
- With Esper's device groups and desired state Blueprints, they can tightly control multiple permission sets at scale
- With Esper Seamless Provisioning, patients could set up their devices 800% faster

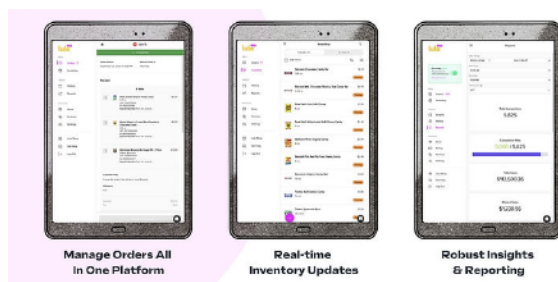

### Orijin (formerly APDS) secures their prison devices with deep device control using Esper

- Orijin (f.k.a. American Prison Data Systems) locks down tablets used in prison systems for education, entertainment, and communications, ensuring the devices can't be misused
- When their legacy MDM's kiosk mode was unable to block access to Chrome and other standard Google apps, they turned to Esper for deeper device control
- With Esper, they were able to have complete control over the device, what apps are and are not available, and deliver a more secure solution

## Taco Bell flips devices from Windows to Android overnight, reduces provisioning steps, and increases device control

- With Esper, Taco Bell migrated EoL Windows POS hardware to Android via OTA overnight while locations are closed, saving millions on CapEx
- Reduced provisioning time for new devices by 380%, reducing 3PL staging and kitting costs
- “Working with Esper allows us to move fast, save money, and now we can make strategic decisions about what hardware to use” - Director of Next Gen Restaurant Tech

## Lula unlocks new revenue streams for convenience stores with Esper-managed devices

- To scale their solution, Lula needed to break free from a tedious manual device provisioning process in order to get devices to convenience store operators faster
- With Esper’s automated provisioning, Lula Convenience can streamline device provisioning, freeing up valuable time and resources to focus on delivering cutting-edge tools to convenience stores
- “Esper made it so much easier to not only build our product but to provision and ship our tablets to our customers” - Co-Founder & CPO

## Snackpass continuously innovates their social ordering platform with Esper

- Snackpass manages and rolls out complex software updates to a diverse fleet across thousands of restaurant brands
- “Esper allows us to effectively manage our devices both individually and as a cohesive unit. When deciding on hardware for our fleet, our first priority is ensuring it’s compatible with the Esper platform.” - Head of Hardware

## Make your device experience exceptional

Esper revolutionizes device management by redefining what it should be: a driver of business growth. We believe device management should do more than meet business demands — it should accelerate your operations and deliver tangible, lasting impact. That’s why we’re leading the market into the modern era, where automation replaces outdated workflows, re-provisioning becomes obsolete, and managing by exception transforms efficiency. Your devices should deliver exceptional experiences. We make that a reality.
